Business Requirements Document (BRD)

DF Reach System

1. Introduction

The DF Reach System is designed to digitize and streamline the management of beneficiaries, programs, employees, and reporting. The platform will enable Field Facilitators (FF), Managers, and Admins to register beneficiaries, assign them to relevant programs and sub-programs, capture education and employment details, and manage mutual fund investments where applicable.

The system will also provide secure employee management, role-based access, login tracking, and robust reporting capabilities for monitoring outreach effectiveness and program outcomes.

2. Objectives

- Simplify the beneficiary registration process.
- Standardize program and sub-program enrollment, including financial and education details.
- Enable role-based access control for Admin, Manager, and Field Facilitator.
- Provide a centralized employee database with history tracking.
- Implement secure login and audit mechanisms.
- Deliver reports and dashboards for monitoring beneficiaries, employees, and programs.

3. Scope

In-Scope:

- Beneficiary management (personal, address, income, education, certification).
- Program and sub-program enrollment (including mutual fund workflows).
- Employee and role management.
- Login management and security.
- Reporting and analytics.

Out-of-Scope:

- External integrations with government/financial systems.
- Payment gateway or financial transaction processing.
- Mobile offline mode (future enhancement).

4. Stakeholders

- Field Facilitator (FF): Responsible for registering and updating beneficiary details in the field.
- Manager: Reviews and monitors beneficiary and program data, manages field staff.
- Admin: Manages system configurations, master data, employees, and roles.
- Beneficiary (Indirect Actor): Provides personal and program details to FF.
- Technical Team: Responsible for backend, database, and infrastructure support.

5. System Actors & Roles

- Admin
 - Manage employees, roles, and permissions.
 - Configure programs, sub-programs, outreach channels.
 - Manage reporting access.
- Manager
 - Monitor beneficiary registrations and program enrollments.
 - Approve/review field facilitator performance.
 - Generate program-level reports.
- Field Facilitator (FF)
 - Add beneficiary personal, program, education, and income details.
 - Enroll beneficiaries in programs and sub-programs.
 - Capture mutual fund data where relevant.
- Employees & Roles
 - Employees are linked to entities, office locations, cost centers.
 - Roles define system permissions.
 - Employee role assignments are managed through emp_roles.

6. Functional Requirements

6.1 Beneficiary Management

- Add/Edit/Delete beneficiary (master_beneficiary).
- Maintain history (master_beneficiary_history).
- Capture personal, contact, address, family, education, income details.
- Beneficiary status (master_status).

6.2 Program & Sub-Program Enrollment

- Assign program and sub-program to beneficiary (beneficiary_programs).
- Capture outreach channel (master_outreach_channels).
- Enrollment details: date, status.
- Mutual Fund Sub-Program workflow with investment details (mutual_fund, mutual_fund_provider, mutual_fund_type).

6.3 Education & Employment Tracking

- Record education details (master_education_levels).
- Capture employment/income sources (master_occupation, earning_range).
- Certifications: name, description, certified status.

6.4 Employee & Role Management

- Manage employee master data (employees).
- Maintain employee history (employee_history).
- Assign employees to entities, office locations, cost centers.
- Define roles and assign via emp_roles, roles, role_actions, role_menu.

6.5 Login & Security

- Employee login credentials (login_details).
- Role-based access restrictions.
- Track login and logout times.
- Enforce data security (mask Aadhaar, secure password storage).

6.6 Reporting

- Beneficiary reports: by program, demographic, geography, education, income.
- Employee performance reports: beneficiary registrations, outreach coverage.
- Program-level impact reports: enrollment status, mutual fund investment summary.
- Audit reports: changes tracked via history tables.

7. Non-Functional Requirements

- Security: Role-based access, encryption for sensitive data.
- Scalability: Support for high volume of beneficiaries across multiple regions.
- Performance: Search/filter within 3 seconds for up to 1 million records.
- Auditability: All changes logged in history tables.
- Availability: 99.5% uptime for field operations.

8. Data Model Reference (Schema Mapping)

- Beneficiary details → master_beneficiary, master_beneficiary_history.
- Programs & enrollment → beneficiary_programs, programs, sub_programs, master_outreach_channels.
- Mutual fund → mutual_fund, mutual_fund_provider, mutual_fund_type.
- Education & employment → master_education_levels, master_occupation, earning_range.
- Employees → employees, employee_history.
- Roles & permissions → roles, emp_roles, role_menu, role_actions.
- Login → login_details.
- Status & master data → master_status, state, district, taluka, village.

9. Workflows

Field Facilitator Workflow (from PDF):

1. FF login.
2. Add beneficiary personal details.
3. Capture program & sub-program details.
 - If Mutual Fund → capture investment details.
 - Else → capture general enrollment details.
4. Capture education & employment details.
5. Save and submit beneficiary record.

Admin Workflow:

1. Manage master data (states, occupations, programs).
2. Manage employees, roles, and access.
3. Generate system-wide reports.

Manager Workflow:

1. Review FF registrations.
2. Monitor program performance.
3. Generate beneficiary/program reports.

10. Dependencies & Assumptions

- Field facilitators require stable connectivity to submit data.
- All master data (state, district, village, occupations) must be preloaded and updated.
- Employee roles must be correctly assigned for system security.
- Aadhaar storage restricted to last 4 digits for compliance.
